

# **„Parainator” Manual guide**

## **Introduction**

Parainator is a device where high temperature and sharp edges are required to do its job. Because of this conditions we advise you extra caution while handling this device. It should not be used by children or left without adult supervision. The manufacturer is not responsible for damage resulting from the use of the device improperly or contrary to its purpose.

**User manual of steam generator** is attached to its packaging

**Warning.** During usage, pay attention to do not let contaminate the slides by honey and wax. The **guides are not resistant** to long water and moisture exposure. During cleaning do not allow slides to contact with water. In the case of inside moisture, it should be dried and then conserve using petroleum jelly.

Slides that have excessive wear or corrosion, should be replaced. For this purpose, it is recommended to contact the manufacturer of the device.

  - Preparing to work
  - Finishing works

## **Handling**

### Preparing to work

1. Read the instructions for use included with Steam generator in set for proper handling
2. Previously unpacked device, place on a solid base and secure it against slipping. (The entire knife with steam outputs must be placed above the inner side of the table.)Use attached electrical holders and fasten them from below.
3. Connect wires to input and output of the knife.
4. Output wire should be secured to prevent worker or third party injury.
5. Fill up the steam generator to level specified in manual and fasten input wire.
6. Connect steam generator to the source of electricity.
7. Wait until steam heat up the knife

## Usage

1. Place the drawer in the nominal position (both slides are pushed together and hidden under the drawer)
2. By holding the top bar of frame, put a frame on the drawer so that the top bar is close to the operator.
3. Support wrists on a drawer and hold frame in place with your fingers and push drawer towards knife and then backwards. ( You can lift frame a little bit with your fingers while reversing )
4. turn the frame to the other side
5. Repeat point 3.
6. Take the frame off the drawer

## Finishing works

1. Disconnect steam generator from electricity source.
2. Wait until everything cool down.
3. Clean knife and the drawer.
4. At the end of the season roll elements of slide should be conserved using petroleum jelly.
5. During storage, protect the unit against moisture and dust deposition
